

## MONTANA NATURAL HERITAGE PROGRAM

1515 East Sixth Avenue  
Helena, Montana 59620  
(406) 444-3009

### ANIMAL SPECIES OF SPECIAL CONCERN

FEBRUARY, 1990

The Montana Natural Heritage Program (MTNHP) is conducting an inventory of the elements of biological diversity in Montana. The inventory includes plant species, animal species, and plant communities that are rare, endemic, disjunct, threatened, or endangered throughout their range or in Montana, vulnerable to extirpation from Montana, or in need of further research.

The attached list of animal species of special concern in Montana is used to direct data acquisition by the MTNHP. It has been developed largely from information supplied by the Vertebrate Species of Special Interest or Concern (Flath 1984), Montana Bird Distribution (Skaar, et al. 1985), Fishes of Montana (Brown 1971), and from the scientific literature, personal contacts, museum specimens, and field research. This list is dynamic and is periodically revised as new data become available to the MTNHP.

Written comments and suggestions are continually needed on this list, particularly regarding recommended additions or deletions. New locational information for any of these taxa is also being solicited. The MTNHP can supply current locational information and status data for most of these taxa.

Animal taxa are ranked on the basis of their global (range-wide) rarity, and their rarity within Montana. These ranks are assigned according to a standardized procedure used by Natural Heritage Programs, and are defined as follows:

#### GLOBAL

<u>RANK</u>	<u>Definition</u>
-------------	-------------------

G1	Critically imperiled globally because of extreme rarity (5 or fewer occurrences, or very few remaining individuals), or because of some factor of its biology making it especially vulnerable to extinction.
----	--

## ANIMAL SPECIES OF SPECIAL CONCERN

FEBRUARY, 1990

The Montana Natural Heritage Program (MTNHP) is conducting an inventory of the elements of biological diversity in Montana. The inventory includes plant species, animal species, and plant communities that are rare, endemic, disjunct, threatened, or endangered throughout their range or in Montana, vulnerable to extirpation from Montana, or in need of further research.

The attached list of animal species of special concern in Montana is used to direct data acquisition by the MTNHP. It has been developed largely from information supplied by the Vertebrate Species of Special Interest or Concern (Flath 1984), Montana Bird Distribution (Skaar, et al. 1985), Fishes of Montana (Brown 1971), and from the scientific literature, personal contacts, museum specimens, and field research. This list is dynamic and is periodically revised as new data become available to the MTNHP.

Written comments and suggestions are continually needed on this list, particularly regarding recommended additions or deletions. New locational information for any of these taxa is also being solicited. The MTNHP can supply current locational information and status data for most of these taxa.

Animal taxa are ranked on the basis of their global (range-wide) rarity, and their rarity within Montana. These ranks are assigned according to a standardized procedure used by Natural Heritage Programs, and are defined as follows:

### GLOBAL

#### RANK      Definition

G1	Critically imperiled globally because of extreme rarity (5 or fewer occurrences, or very few remaining individuals), or because of some factor of its biology making it especially vulnerable to extinction.
----	--

G2	Imperiled globally because of rarity (6 to 20 occurrences) or because of other factors demonstrably making it very vulnerable to extinction throughout its range. (Endangered throughout range).
G3	Either very rare and local throughout its range or found locally (even abundant at some of its locations) in a restricted range, or because of other factors making it vulnerable to extinction throughout its range; in the range of 21 to 100 occurrences. (Threatened throughout range).
G4	Apparently secure globally, though it may be quite rare in parts of its range, especially at the periphery.
G5	Demonstrably secure globally, though it may be quite rare in parts of its range, especially at the periphery.
GU	Possibly in peril range-wide, but status uncertain; more information needed.
GH	Historically known; may be rediscovered.
GX	Believed to be extinct throughout range; historical records only, continue search.

STATE RANK	<u>Definition</u>
S1	Critically imperiled in Montana because of extreme rarity (5 or fewer occurrences, or very few remaining individuals), or because of some factor of its biology making it especially vulnerable to extirpation from the state. (Critically endangered in state).
S2	Imperiled in Montana because of rarity (6 to 20 occurrences), or because of other factors demonstrably making it very vulnerable to extirpation from the state. (Endangered in state).
S3	Rare in Montana (on the order of 20+ occurrences). (Threatened in state).
S4	Apparently secure in Montana.
S5	Demonstrably secure in Montana.
SU	Possibly in peril in Montana, but status uncertain; more information needed.
SH	Historically known in Montana; may be rediscovered.
SX	Apparently extirpated from Montana.

Other codes:

Q      Taxonomic questions or problems involved; more information needed.

T      Rank for a subspecific taxon (subspecies or variety); appended to the global rank for the full species.

It should be emphasized that many of the global and state ranks are constantly being revised or completed; these updated rankings will appear on revised lists as they become available.

USF&WS STATUS: The symbols in this column denote the categories defined in the U.S. Fish and Wildlife Service Notice of Review (Federal Register, 1985).

LE    Listed Endangered  
LT    Listed Threatened  
P     Proposed E or T  
C1    Notice of Review, Category 1 (substantial biological information on file to support the appropriateness of proposing to list as endangered or threatened).  
C2    Notice of Review, Category 2 (current information indicates that proposing to list as endangered or threatened is possibly appropriate, but substantial biological information is not on file to support an immediate ruling).  
C2\*   Category 2, and the taxon is possibly extinct.  
3A    Taxa for which the USFWS has persuasive evidence of extinction.  
3B    Names that, on the basis of current taxonomic understanding, do not represent taxa meeting the Endangered Species Act's definition of "species".  
3C    Taxa that have proven to be more abundant or widespread than was previously believed, and/or those that are not subject to any identifiable threat.

USFS STATUS: The symbols in this column denote the categories defined by the U.S. Forest Service manual (2670.22). S = Sensitive species; W = Watch status. These species are listed as such by the Regional Forester for Montana National Forests. Not all USFS Sensitive and Watch status species are considered here.

STATE STATUS: These symbols give the state legal status of vertebrates as listed in the 1987 Statutes of Montana for the Department of Fish, Wildlife, and Parks.

GA = Game Animal  
GF = Game Fish  
FB = Fur Bearing Animal  
MB = Migratory Bird  
UB = Upland Game Bird  
E = Endangered  
NG = Nongame Wildlife  
P = Protected Species  
U = Unprotected Species

Management Status:

CS = Closed Season  
RH = Restricted Harvest
